| Applicant UNIPEG INTERNATIONAL PT   | YLTD et al  |   |  |  |  |
| 1. This international preliminary examinat  | ion report has been prepa   | red by this International Preliminary Examining Authority and   |  |  |  |
| is transmitted to the applicant according   | g to Article 36.  |   |  |  |  |
| 2. This REPORT consists of a total of 3   | sheets, including this co   | ver sheet.  |  |  |  |
| This report is also accompanied by amended and are the basis for this 70.16 and Section 607 of the Adr  | s report and/or sheets con  | of the description, claims and/or drawings which have been taining rectifications made before this Authority (see Rule nder the PCT). |  |  |  |
| These annexes consist of a total o  | of 2 sheet(s).  |   |  |  |  |
| 3. This report contains indications relating  | to the following items:   |   |  |  |  |
| I Basis of the report   |   |   |  |  |  |
| II Priority   |   |   |  |  |  |
| III Non-establishment of opi  | inion with regard to novel  | ty, inventive step and industrial applicability   |  |  |  |
| IV Lack of unity of invention   | n ·   |   |  |  |  |
| V X Reasoned statement unde citations and explanation   | V X Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement |   |  |  |  |
| VI Certain documents cited  |   |   |  |  |  |
| VII Certain defects in the inte   | ernational application  |   |  |  |  |
| VIII Certain observations on t  | the international application   | on  |  |  |  |
| Date of submission of the demand  | 15  | ate of completion of the report   |  |  |  |
| 5 July 2004   |   |   |  |  |  |

|   |  | Claims      | NO          |  |  |  |  |  |  |
|   | Industrial applicability (IA)              | Claims 1-19 | YES         |  |  |  |  |  |  |
|   |  | Claims      | . <b>NO</b> |  |  |  |  |  |  |

#### 2. Citations and explanations (Rule 70.7)

Claims 1-19 meet the criteria set forth in PCT Article 33(2) - (4) for novelty, inventive step and industrial applicability. The prior art published before the priority date does not disclose an integrally formed clamp which includes a flexible joint urging the opposed pair of elongate members into a clamping position when the clamp is in a passive state and including a locking device which has a first end hinged to the first handle portion and movable to a second position which locks the clamp in a clamping position.

The closest art is WO 1999/006626 which discloses an integrally moulded holding device with an intermediate joining piece, but item 24 does not lock the elongate portions in a clamping position. Item 24 permits movement between the members 10 and 11 as it is disclosed as a "living hinge".

#### **CLAIMS**

1. An integrally formed clamp including:

an opposed pair of first and second elongate substantially rigid members, the first elongate member having a first handle portion and a first clamping portions and the second selongate member having a second handle portion and a second clamping portion;

a flexible joint intermediate the lengths of the first and second elongate members configured to urge the first and second clamping portions into abutment; and

a locking device,

wherein the locking device has a first end hinged to the first handle portion and rotatable about the hinge and a second free end adapted to releasably cooperate with the second handle portion whereby to lock the first and second handle portions in spaced relationship and the first and second clamping portions in abutting relationship.

- 2. A clamp according to claim 1 for keeping members of a pair of garments together during laundry processing, wherein:
- in the passive state the first and second clamping portions are urged into abutment and the first and second handle portions are held in spaced relationship by the flexible joint;

upon compression of the first and second handle portions, the first and second clamping portions are forced apart such that the first and second clamping portions are adapted to receive the pair of garments and to clamp together the garments when the first 20 and second handle portions are released; and

the abutting clamping portions secure the garments against dislodgment from the clamp during processing.

3. A clamp according to claim 1 or 2, wherein a hook or clip for engaging with a clothes line or rod is provided on either or both of the first and second handle portions.

WO 2004/022835 PCT/AU2003/001135

13

4. A clamp according to any one of the preceding claims, wherein the locking device includes a guide to guide thesecond handle portion into cooperative engagement with the locking member.

- 5. A clamp according to claim 4, wherein the guide is a ramp or cam surface.
- 5 6. A clamp according to claim 4 or 5, wherein the second arm includes an inclined surface tapering from the guide towards the hinge and the first arm includes a complementary support surface on which the inclined surface rests when the locking device is engaged to the second handle portion.
- 7. A clamp according to any one of the preceding claims, wherein the locking device
  10 includes a shoulder and adjacent recess, and a protrusion of the second handle portion is
  adapted to ride over the shoulder and lockably rest in the recess, the protrusion held in the
  recess by the flexing force of the first and second arms.
- 8. A clamp according to any one of claims 1 to 6, wherein the second handle portion includes a shoulder and adjacent recess, and a protrusion of the locking device is adapted to ride over the shoulder and lockably rest in the recess, the protrusion held in the recess by the flexing, compressive force of the first and second arms.
  - 9. A clamp according to any one of the preceding claims, wherein the second handle portion includes a guiding, longitudinally aligned slot configured to cooperate with a knob extending proud from the locking device.
- 20 10. A clamp according to any one of claims 1 to 8, wherein the locking device includes a longitudinally aligned slot configured to cooperate with a guiding knob extending proud from the second handle portion.
  - 11. A clamp according to any one of the preceding claims, wherein the terminal end of the second handle portion includes a platform oriented transverse to the longitudinal axis
